Blank cells represent periods prior to the Fund's launch.

¹ The ongoing charges figure (OCF) is the cost incurred in running the fund shown as a percentage of the value of the assets of the fund. It includes the investment manager fee in addition to the trustee, custodian, administration, legal and audit fees. It does not include the platform fees, fund transaction costs or any potential one-off charges (e.g. advice fees or dilution levy).

² Performance figures are derived from Fund net asset values (NAV) and are quoted net of all fees paid from within the Fund.

Important Information: The value of investments and any income from them, can go down as well as up, and you may not recover the amount of your original investment. There is no guarantee that the investment objective will be achieved. Where an investment involves exposure to a foreign currency, changes in rates of exchange may cause the value of the investment, and the income from it, to go up or down. In the case of some investments, they may be illiquid and there may be no recognised market for them and it may therefore be difficult for you to deal in them or obtain reliable information about their value or the extent of the risks to which they are exposed. Investments in emerging markets are subject to certain special risks, which include, for example, a certain degree of political instability, relatively unpredictable financial market trends and economic growth patterns, a financial market that is still in the development stage and a weak economy.
