Introduction to Bankline XML import

What is Bankline XML import?

Bankline XML import adapts the ISO 20022 standard pain.001.001.03 credit transfer format in order to allow your business to import payment files rather than keying them manually. Because the contents of the XML file are converted into Bankline formatted payments to allow them to be managed through our payment systems it is important to read the guide carefully to note the specific requirements that apply (such as field length), which may differ from your current use of the ISO 20022 pain.001.001.03 format.

This guide will often refer to the equivalent field in our Bankline CSV format and it is recommended that it be read in conjunction with the Bankline CSV guide which can also be obtained from the Importing Payments Guides section of our Training & Support site at:

<http://www.business.natwest.com/business/natwest-business-bankingsupportcentre/bankline-support-centre/training-and-support.html>

The payment and payment to template types listed below are supported:

- Standard domestic payments, sent via the faster payments scheme to any UK Bank.
- Urgent domestic payments, known as CHAPS.
- An internal transfer between two of your own accounts registered on Bankline, known as IAT.
- International payments, including SEPA and non-SEPA payments.
- A Bulk list payment referencing a Bulk list set up on Bankline. The List may be an IAT list, or a standard domestic list.
- An Ad Hoc standard domestic bulk payment.

Only the Standard Domestic Bulk and Inter Account Transfer Bulk Payment types listed above will create single debit, multi credit transactions. This remains the case even if one Batch is followed by multiple Transactions in the same XML file.

Please note that Bankline does not support single debit, multi credit SEPA payments.

How do I structure a Bankline XML import format?

A standard XML format file consists of the following elements:

- **Container** element: Defines the file as an XML file.
- **Header** element: Contains the name of the file and some summary information.
- **Batch** element: Details the debit side of the payment, including the debit account, and the payment date.
- **Transaction** element: Details the credit side of the payment, such as the beneficiary name and account number.

A single file must contain:

- One Container.
- One Header.
- At least one Batch.
- At least one Transaction per Batch (N.B. Unless it is a specific Bulk Payment type each transaction within the batch will create both a debit and credit entry).

There is one important restriction: A bulk payment type can only ever contain a single Batch.

All these elements are defined below, and there are complete examples in Appendix B.

The maximum number of transactions in a single file is 4,000 for non-bulk payments or 3,000 for a bulk payment.

What is a SEPA payment?

A SEPA payment is a standard payment sent in euro currency to a SEPA-reachable beneficiary IBAN located within the SEPA-zone. The SEPA-zone at publication consists of all the countries of the EU plus Iceland, Liechtenstein, Norway, Switzerland, Andorra, Monaco, San Marino and UK Crown dependencies.

Within the above criteria, the following important payment specifics in International payments must also be adhered to:

1. The payment charges must be set to shared, where the remitter is to pay debit charges and the beneficiary is to pay credit charges. Within the XML format, this is set in the ChrgBr tag as either the value of SHA or SLEV. If the ChrgBr tag is not provided then the charges are assumed to be shared.
2. There must be no use of an intermediary institution.
3. There must be no use of SWIFT Codewords.
4. The payment priority must be set to Standard priority, not Urgent. This is set in the InstrPrtry tag as a value of NORM or N.

How do I enter the debit account?

Accounts can exist in two formats:

- **BBAN.** This is Basic Bank Account number, and relates to account formats that are not in IBAN format.
- **IBAN.** This is the International Bank Account number. It is a standardised international format which always starts with a 2 letter ISO country code, such as IE or GB. All SEPA-zone countries have IBANs, as do many other countries.

BBAN format for Sterling accounts is '6n8n' i.e. a six digit sort code followed by an 8 digit account number. For an NWB currency account it is '3n/2n/8n'.

IBAN format is 'GB2nNWBK14n' which is the 'GB' country code followed by two check digits, 'NWBK' and then the 14 digit BBAN as defined above for Sterling accounts, and derived for currency accounts. You can find the IBAN for both Sterling and Currency accounts in Bankline on the Account statement screen.

For the debit account (i.e. your account on Bankline), the account must be entered as follows:

Payment type	Format
International	BBAN or IBAN
All other payments	BBAN only

Irrespective of the format, the debit account can be entered in one of two locations in the XML:

<DbtrAcct><Id><IBAN>

or

<DbtrAcct><Id><Othr><Id>

The debit BIC is optional in all cases.

How do I enter the beneficiary/credit account?

The beneficiary account details are entered in two locations in the XML:

- **CdtrAgt** tag – this defines the financial institution of the beneficiary.
- **CdtrAcct** tag – this defines the actual beneficiary account number.

The table below details how these should be populated for non-template payments:

Payment type	CdtrAgt	CdtrAcct
International	If the payment is SEPA and the destination IBAN is EU/EEA then this tag does not need to be present, or else <CdtrAgt><FinInstnId><Othr><Id> populated with NOTPROVIDED Alternatively, if the beneficiary BIC is known, then this should be populated in <CdtrAgt><FinInstnId><BIC> If the beneficiary does not have a BIC, then the NCC	Whether the beneficiary account is IBAN format or another format, it can be populated in either <CdtrAcct><Id><IBAN> Or, <CdtrAcct><Id><Othr><Id>
Currency IAT where credit account is a currency account	This tag must not be present	Currency account key entered in either <CdtrAcct><Id><IBAN> Or, <CdtrAcct><Id><Othr><Id>
All others	<CdtrAgt><BrnchId><Id> populated with the six digit sort code as '6n' format.	Eight digit beneficiary account number present as '8n' format in either <CdtrAcct><Id><IBAN> Or, <CdtrAcct><Id><Othr><Id>

For template payments, CdtrAgt tag should NOT be present in your XML, unless you wish to denote that BIC/NCC/Sort code is not provided like this:

```
<CdtrAgt><FinInstnId><Othr><Id> NOTPROVIDED</Id></Othr></FinInstnId></CdtrAgt>
```

For template payments, CdtrAcct tag should NOT be present in your XML, unless you are making an international payment and wish to specify the currency the payment to be sent in is different from that specified in the InstdAmt tag Ccy attribute, like this:

```
<CdtrAcct><Ccy>XXX</Ccy></CdtrAcct> - where XXX is replaced with a valid Bankline currency code.
```

Alternatively, for template payments, the Nm and Tp tags within CdtrAcct can be safely used as these are not mapped to anything in Bankline.

XML Specification

Details of the tables used.

Level

This details the level that the tag occurs within the XML structure. A tag with ++ therefore is within the above tag with + only.

XML tag

This is the actual name of the tag

Occur

This details how often the tag occurs in the XML structure. The first number being the minimum number of occurrences, and the last number being the maximum number of occurrences. A “c” indicates that the tag is conditional with another tag at the same level: only one of them may be present.

Content

This summarises the data that the tag may contain:

- Tag = The tag contains other XML tags within it.
- 35x = indicates a free format data. The preceding number is how many characters are allowed, in this case 35.
- n = indicates that this data must be a number.
- 2 = exactly 2 characters must be present (also 3 for 3 characters).
- Code = A specific data must be entered – see the description for details.
- Dt = date, in ISO format YYYY-MM-DD e.g. 2016-09-15
- Dt/Tm = date and time, in ISO format YYYY-MM-DDTHH:MM:SS e.g. 2016-09-15T08:25:59

Character sets

For standard domestic and sterling account Inter Account Transfer payment types (including bulk), any free format tags are limited to the following character set:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9	.	-	/													

In addition, the ampersat @ character is allowed for the email address in the remittance information tag only.

NB – the last character is a space. Note that the ampersand & character is not allowed. If lower case characters are used they will be converted to upper case during the Bankline payment process.

For international, urgent domestic (CHAPS), and currency Inter Account Transfer payment types, any free format tags are limited to the following character set:

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s	t	u	v	w	x	y	z
0	1	2	3	4	5	6	7	8	9	.	-	/	?	:	()	,	+	'						

NB – the last character is a space. Note that the ampersand & character is not allowed. Some fields will be converted to upper case during the Bankline payment process.

Description

This provides clarification on the tags data content, and where it can be expected to appear in Bankline.

Payments types and tag usage

The following payment types are supported via Bankline XML import:

All payments and payments to templates:

- Std = Standard domestic payment, sent via the faster payments scheme to any UK Bank.
- Urg = Urgent domestic payment, known as CHAPS.
- IAT = An internal transfer between two of your own accounts registered on Bankline.
- Intl = An international payment, including SEPA and non-SEPA payments.

Bulk payments:

- List = Bulk list payment referencing a Bulk list set up on Bankline. The List may be an IAT list, or Standard domestic list.
- Ad Hoc = Bulk Standard domestic payment that does not reference a Bulk list on Bankline.

For each payment type, the usage of the tag is described with a code:

- M = Mandatory for this payment type.
- O = Optional for this payment type – see description.
- C = Conditional for this payment type – see description.
- - = Has no effect if included for this payment type (tag will not be used) N.B. If you do include these tags you will still need to conform to the content restrictions.
- x = Will cause a rejection/error if included for this payment type.

Error messages

If your file has formatting errors, Bankline will display an error message listing the line and column in the XML text file where the error is located.

For example, the message below:

Your file cannot be imported as it contains formatting errors. Element 'PmtMtd' is not allowed for content model '(PmtInflId,PmtMtd,BtchBookg?,NbOfTxS?,CtrlSum?,PmtTplnf?,ReqdExctnDt?,PoolgAdjstmntDt?,Dbtr?,DbtrAcct?,DbtrAgt?,UltmtDbtr?,ChrgBr?,ChrgsAcct?,CdtTrfTxInfl+)' (line 32, column 11)

Identifies an error in the tags used – in this case at the Batch level. The error has identified that PmtMtd tag is not allowed for the content model, which is the XML definition. This means that, as PmtMtd is part of the content model, another tag is missing or in the wrong order. In the example above PmtInflId is missing, and so PmtMtd is encountered instead and the error shown.

Content is also validated for length and, in some cases, whether it matches a definition.

Here is an example of the former, where a field length is too long:

Yourfilecannotbeimportedasitcontainsformattingerrors. Value 'SDDEFT0061234567890' has length '22' which exceeds maxLength facet value '18' (line 11, column 45)

And here is an example of the latter, where a value has been used that is not allowed:

Your file cannot be imported as it contains formatting errors. Value 'AB' not in enumeration (line 23, column 25)

The XML specification sections below will help you to interpret these messages, should you receive them.

Section 1: Container

Your file should conform to the XML ISO20022 pain.001.001.03 format as used by Bankline file import.

The file container for your payments is always the same, and it should look like this:

```
<?xml version="1.0" encoding="UTF-8" ?>  
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03" xmlns:xsi="http://www.w3.org/2001/XMLSchema-  
instance">  
<CstmrCdtTrfInitn>
```

Header, batch and transaction XML goes here (see sections below for details)

```
</CstmrCdtTrfInitn>  
</Document>
```

Section 2: Header

Level	XML Tag	Occur	Content	Description	Payment				Template payment				Bulk pay.	
					Std	Urg	IAT	Intl	Std	Urg	IAT	Intl	List	Ad Hoc

3. International SEPA payment to Template

Note that this example assumes that the underlying template on Bankline is SEPA valid.

This deviates from standard pain.001.001.03 as fields that are normally mandatory in that specification are not required for a payment to a Bankline template

8. Currency IAT transfer

This is a payment between two accounts on Bankline where at least one is a non-sterling currency. This deviates from standard pain.001.001.03 as fields that are normally mandatory in that specification are not required for an IAT transfer.

This example shows how to enter an agreed FX deal in the XML.

Appendix C: Glossary

Term	Meaning
BBAN	Basic Bank account number
BIC	Bank Identification Code. Used to clearly identify a financial institution. The BIC is optional for SEPA payments.
IAT	Inter-Account Transfer. A transfer between two of your own accounts registered on Bankline.
IBAN	International bank account number. Must be present for SEPA payments.
NCC	National Clearing Code, such as a six digit sort code in UK or Irish banks, or a Fedwire number in the United States of America.
SEPA	Single Euro Payment Area.
XML	Extensible Mark-up Language

Appendix D: Codewords

These rules apply to additional codewords (fields T048, T050, through to T066) and additional codewords text (fields T049, T051, through to T067) as entered in the RgltryRptg tag.

Additional codewords should only be used where strictly necessary, as their use can delay the payment, prevent SEPA routing where available, and increase payment charges. Furthermore, where a codeword requires an action by the receiving bank, the codeword should only be used if the receiving bank has already agreed in advance that they will act on the codeword in question.

Finally, certain combinations of codewords are not permitted. For further information on usage of codewords please refer to the SWIFT handbook.

Codeword	Definition	Additional text
CHQB	Pay beneficiary by cheque <i>This codeword may only be used by Shipping customers, and when used the beneficiary account Number (field T028) must not be populated.</i>	-
CORT	Settlement of a trade e.g. FX deal or securities transaction	-
HOLD	Pay on Identification <i>This codeword may only be used by Shipping customers.</i>	Optional
INTC	Intra-company payment	-
REPA	Related e-payments reference	Optional
SDVA	Execute with Same Day Value	-
PHOB	Advise beneficiary by phone	Optional
TELB	Advise beneficiary by most efficient means	Optional
PHON	Advise account with Institution by phone	Optional
TELE	Advise account with Institution by most efficient means	Optional
PHOI	Advise Intermediary Institution by phone <i>When used the Intermediary Bank identifier (field T043) must be populated.</i>	Optional
TELI	Advise Intermediary Institution by most efficient means <i>When used the Intermediary Bank identifier (field T043) must be populated.</i>	Optional
